James

The Caroma toilet along with the .5gpm faucets and 1.5gpm shower heads come in way below your LEED requirements for this project

An annual savings of 3500-4000 gallons a year over a standard 1.6 gpf toilet and 1-1.5 faucets and 2.5-3 gpm shower heads

Dana,

Thank you! Wow, this is a fantastic product. Is there any feasibility of also supplying the faucets and fixtures to this home? I have CC'd Mark on this email so he can ensure he has everything he needs.

Also attached is our in-kind donor form. If you would like to have your company recognized for this donation please complete and return and we will be sure to add you to our list of donors.

Thanks!

- James

James,

The toilets will be CAROMA

They are the company that invented dual flush toilets 30 years ago and are the leading manufacture in the Pacific Rim ,Europe and Far East

[www.caromausa.com](http://www.caromausa.com)

They are dual flush so liquid and solid flush buttons the full flush uses 1.28 gpf and the half is .8gpf this works out to .9 gallons per flush on average household with a large water savings.

These toilets are unique as they also have a 4" trap-way the normal W is 2 5/8" or smaller so this fixture dose not clog

The model Caravel 270 bowl with the Sydney Smart Flush tank

Value for these is \$550.00 each retail

Thanks fo letting us help with your mission and let me know if we can supply anything else

Dana
